

High Biblical Days for 2016

The "Melchizedek Biblical Solar Calendar"

Observed Sun Equinox dates for 2016-2019, Jerusalem time (i.e. not "mean sun" equinox calculation times are presented on our typical calendars)  
2016: Vernal - 20 th March; Autumnal 22nd Sept

Note: True sun obseration vs Mean sun estimates:

It is important to know the difference, especially if you have been unable to identify the sun dial observation due to cludy conditions!

All listings of the occurrence of the equinox on typical *published calendars* is a mathematical *estimate* - known as the "mean sun estimate" - an average estimation from a standardised mathematical formula.

In 2016, the calendars list the equinox as as occuring (Jerusalem longitude) on 20 Mar 6:30 a.m.

As it is estimated at occuring during the daylight hours in Jerusalem in 2016, we can be assured that the *actual* true sun observance (as percieved on a sundial) would also be occuring on the day of the 20th March 2016, Jerusalem time.

When our calendar "mean sun estimation" of the equinox is presented as occuring (Jerusalem Longitude) in the *night hours before midnight* such as is the case in 2019, where it is presented as occuring on 20 Mar 2019 at **11:58pm** at night, then we expect that the true sun observation of the equinox would be practically observed on a sun dial (the tell tale straight line) on the 20th March 2019. But if the means sum estimate is in the night hours after midnight we would expect the true sun observation of the equinox to be only observable in the next day (i.e. the 21st)

Melchizedek Biblical Solar Calendar

On the biblical solar calendar the falling of the High Days and Sabbaths is precisely the same pattern and count every year with no "leap year" intercalations necessary

Biblical High Days & Weekly Sabbaths And Apostolic Testimony of Yahushua's Sign Of Jonah

Note: Gregorian calendar dates (and days) change each successive year.

The occurrence of the equinox is day 1 of the new year but day 4 of the *biblical week* according to the law of the creation of the luminaries on the **4th day of the week** - Gen 1:14-19
